

QUALITY OF SERVICE

We are an ISO 9001:2008 certified company; therefore we take keen interest in maintaining optimum quality standards at our manufacturing unit. We leave no stone unturned to deliver maximum satisfaction to our customers. With utmost sincerity we make use of the finest quality material in the manufacturing of our products and pass them through a series of tests and checks, thus providing exceptional quality electrical panels that are in sync with industry standards to the domestic and overseas market. Our quality experts supervise the production at every stage right from procurement of raw materials to the final finished product. Backed by the latest and sophisticated equipment and technologies our highly efficient and skilled team ensure production of the most superior, reliable and cost effective products. These products score high on effectiveness and are in great demand within India and in the international market. Our assurance does not end, but truly begins when we deliver our panels to our customers.

AN ISO 9001:2008 CERTIFIED COMPANY

COMPANY PROFILE

Estech Controls with over a decade of professional experience has emerged as a prominent, reputed and sought out manufacturer and exporter specializing in a wide range of Electrical Control Panels and Distribution boards in the market. Being an ISO 9001:2008 certified company we offer a wide variety of robust and cost effective Control Panels paying utmost attention to the quality of the product.

Over the past decade we have grown to a modest unit having all facilities required for Panels Manufacturing in-house with a workspace of around 7500 sqft.

We also have our own specialized electrical contracting firm SRINIVAS ELECTRICALS (www.srinivaselectricals.com) with a "Class 1" license issued by the Electrical Inspectorate, Government of Karnataka. Our emphasis has ever since broadened to add engineering and implementation of modern systems to the services we offer while still maintaining a significant presence in the Power Distribution and Control System. This approach has ensured a consistent and strong growth path. We are proud to be associated to more than 250 clients including many in India, Sri Lanka and many other countries.

OUR TEAM

We have employed a professional, prolific, experienced and dedicated team of around 40 people who are adept in their work related to manufacturing and exporting. These professionals work in tandem with each other to complete the task within the stipulated time frame. Hence, each product which comes out of the production unit is dexterously designed and constructed and of superior quality and finish.

OUR INFRASTRUCTURE

Our Company has incorporated the latest infrastructure to execute work in a highly proficient manner ensuring accuracy and precision of all our products. The well planned and stocked manufacturing set-up has been beneficial to the company in meeting the different process related needs, right from designing of products to their finish and polishing.

The various facilities we have in-house are:

- Fabrication
- Pre-treatment and Painting plant
- Assembly and Wiring
- Testing and Quality Assurance.

All these units function in an integrated environment to bring forth the most reliable range of products. Our highly experienced professionals oversee the operations of these units to meet the quality and demands of our Clients and Customers.

OUR PRODUCTS

We manufacture Electrical Panels in varied standard and customized configurations as per client specifications to meet the various industrial requirements.

Our products are meticulously chosen and manufactured with highest precision and quality with great attention to the minutest detail; consequently our clients and customers get the best products in the market that are known for their handling ease, unconstrained performance and guaranteed durability.

Our range of Instrumentation Panels is used in process plants for plant automation purpose. We offer Instrumentation Panels which find application in various industries such as water treatment plants, chemical industries, sewage treatment plants, boiler control systems etc. These Instrumentation Panels are equipped with remote input/output units and communication bus to control several PLC inputs and Outputs.

- Generator panels
- Automation panels
- Cable Trays
- MCC panels
- PCC panels
- ACB panels
- APFC panels
- Forward Reverse panels
- Electrical control panels
- Switch boards
- Variable DC Drive panels
- AMF panels
- Power distribution panel
- Metering panels
- Change over panels
- PLC panels
